

Baseline Data			
Sector	Information Required	Government Ministry/agency ²	Location of available information
Productive			
Agriculture			
	Calendar of production activities		
	Cropped area for different products (Seasonal, annual or permanent crops)		
	Production volume for each crop		
	Unit prices for each crop (at farmgate, wholesale and retail levels)		
	Expected unit yields for all crops		
	Forecasted volume of production		
Livestock			
	Animal stock		
	Unit prices paid to owners for animals		
	Production, annual or monthly value (milk, cheese, eggs, etc)		
	Prices paid to producers		
Fishery			
	Boats and nets (number and capacity)		
	Monthly catch (in volume or weight)		
	Prices paid to fishermen		
Commerce			
	Most recent commerce census or survey		
	Time series of commerce and trade volume and prices		
	Information on small and medium enterprises		
	Gross domestic product, by commerce categories		
	Periodic surveys carried out by trade and industry ministries or by central banks		
Industry			
	The most recent industrial census		
	Time series of industrial production and prices		
	Data on small and medium enterprises		
	Gross domestic product, by branches and activity		
Tourism			
	Most recent survey on tourism sector		
	Time series of tourist arrivals, seasonality, and income		
	Average length of stay and expenditures		
	Gross domestic product for tourism and subsectors		
	Static baseline on assets		
Social			
Housing and Human Settlements			
	Most recent household surveys		
	Most recent housing census		
	Value of monthly rentals		
	Construction cost		
	Construction sector capacity		
	Costs of typical furniture and equipment in the affected area, by dwelling type		
	Number of dwellings in the affected area, specifying for each whether they are rural or urban, single- or multi-family, owned by men or women, privately or publicly-owned		
	Quality of existing dwellings, broken down either by permanent versus temporary units, the type of construction materials used (reinforced concrete, brick, wood, adobe, cardboard, etc.), the degree of conservation (good, regular, poor, etc.) or the type of dwelling (house, mobile home, shack, etc.)		
	Average dwelling size by type, taking into account the average number of inhabitants per unit and the average area in square meters		
	The main construction techniques and materials used in the affected area		
Education			
	Number of educational premises existing in the affected area, classified into urban and rural, publicly and privately owned and educational level (primary, secondary or middle, technical and vocational, university).		
	Number of classrooms and students –total or, for example, per morning, afternoon and evening shift– for each educational premise		
	Quality of the building of the premises, based on –for example– the type of construction materials used (adobe, wood, brick, concrete, etc.), the average age of the construction and its degree of maintenance		
	Furnishings and equipment typical of educational centers in accordance with previously defined categories		
	Unit building, furniture and equipment costs		
Health			
	The socio-demographic situation and the status of the main epidemiological indicators, including the morbidity rate and incidence of different diseases that are relevant to the type of disaster in question		
	A description of the characteristics and location of existing health-care facilities		
	The existing human resources, equipment and medical supplies in the health sector and its facilities		
	The sector's management, the way in which it is financed and its financial resources		
	The health service coverage provided by each of the different institutions		

Sector	Information Required	Government Ministry/agency ²	Location of available information
	The unit cost of the services supplied, including the cost of a doctor's visit, daily hospital room charges and average wages, among others		
Cultural heritage			
	Number and characteristics of public and private historic heritage assets –in other words, broken down into the categories of world heritage, heritage buildings, museums, archaeological sites, movable goods, archives or documentary collections heritage churches, houses located in historic centers, libraries and collections located in foundations, libraries and churches		
	Quality of construction of the above premises, based on –for example– the type of construction materials used (adobe, wood, brick, concrete, etc.), the age of the construction and its degree of maintenance; - Furnishings and equipment typical of heritage centers in accordance with previously defined categories		
	Unit costs of building, furniture and equipment		
Infrastructure			
Drinking water and sanitation			
	Organization of the entire water supply subsector: service provider utilities, municipalities and regulatory and governing bodies		
	Breakdown of the population served by collective and individual systems (such as collective water systems, individual wells, multi-family systems)		
	Pre-disaster water service coverage levels (urban and rural)		
	Costs of materials, construction, equipment, chemicals/reagents and other inputs required for the rehabilitation and reconstruction of systems		
	Population served before the disaster (number of domestic connections, average levels of water consumption, etc.)		
	Water supply rates, existing subsidies, billing collection effectiveness		
	Blueprints of all affected systems		
	Construction techniques and materials used in the systems' components		
	Sewage disposal rates, subsidies and billing effectiveness		
	Geographical coverage and beneficiaries of services before the disaster		
	Same for solid waste collection and disposal system		
Electricity			
	Description of assets and their locations: Power plants, transmission lines, substations, distribution grids		
	Performance projections		
	Historical sales, by volume and rate, for all user sectors		
	Expected growth rate fo energy sales, per year		
Transport			
	Types of roads and length for each type		
	Bridges and tunnels		
	Railroad tracks, station buildings, signals		
	Airports and buildings		
	Unit operational costs for transport on persons and cargo, for different types of vehicles		
	Traffic information into/outof affected areas, pre- and post-disaster		
Communications			
	Post and telecommunications installations		
	Building costs, locations, equipment costs		
	Annual revenues or sales, per enterprise		
Cross sectoral			
Public Administration			
	Government buildings and equipment		
	Public records		
	Affected Personnel		
Financial Sector			
	Banking and finance institutions' buildings and equipment		
	Banking assets		
	Outstanding loans, according to type (micro, small, large)		
Environment			
	Inventory of environmental assets		
	Locations of important ecosystems		
	Hazardous sites		
	Environmental infrastructure
